Senior Software Engineer (Remote)

About Us

33Across is a programmatic advertising pioneer with over 15 years of experience building first-party data segments, identity resolution technology, and programmatic monetization through big data and machine learning. Future-proofing the addressable infrastructure, 33Across provides direct access to critical signals that power privacy-safe programmatic transactions for supply-side platforms, demand-side platforms, publishers, data companies, agencies, and everything in between.

The Role:

We are seeking a senior-level software engineer to extend our current platform and expand its offerings. You will have the opportunity to work on our Identity solution - Lexicon and/or ad exchange product suite, each of which handles Billions of requests/day, and processes Terabytes of data/hour. Our innovative platform works with all major Identity providers, advertising exchanges, and demand partners, to help thousands of publishers monetize their content with the most relevant ads.

You Will:

- Build, enhance, and maintain our Lexicon suite of applications, ad servers, event handlers, dashboards, workflows, API's, micro-services, and data processing systems

- Integrate with our SQL/BigData/NoSQL backend infrastructure to store and pull data that feeds insights and reports

- Work closely with other developers, designers, quality assurance and operations engineers, and product managers to develop and support new and existing systems in the cloud

- Become an expert on 33Across' exchange platform, serving as the internal and external expert for the product offerings

- Help maintain code quality, organization, and automatization while working with a globally distributed team

You Have:

- 5+ years of software development experience

- 3+ years of development experience with Java, and related technologies

- A high level of comfort with Linux utilities and CLI

- Experience working with relational and non-relational databases (we use Aerospike, ClickHouse, Redis, Postgres, MySQL)

- Experience developing and supporting high-availability, high-performance web applications

Bonus Point:

- If you have experience with Hadoop tech stack: HDFS, Pig, Hive, MapReduce, Spark
- If you have experience working with cloud platforms (AWS or GCP)
- If you like working on personal projects and can share code samples

What We Offer You

We are an employee-owned company with a distributed team that works remotely. We offer a fun and engaging online work environment with talented co-workers. Our team members are shown appreciation through substantial perks and benefits.

- Competitive salary, bonus and equity
- 100 % paid medical coverage for most plans
- 100% paid vision and dental benefits
- Dependent care FSA, healthcare FSA & HSA accounts
- Robust paid time off, company holidays, personal days and sick days

More Benefits & Perks We Offer

- Flexible/ Remote Working
- Paid Child Bonding Leave
- Remote Work Stipends
- Employee Recognition Program

- Individual Career Development Planning & Budgets
- A Rewarding & Engaging Company Culture
